

# FRAMEWORK™ STUD WALL

## Maximum Flexibility. Integrated Approach.

We have you covered with maximum design flexibility and aesthetic appeal for your next project. Apply virtually any wall system to a building using Framework™ Stud Wall, including EIFS stucco, WRB board, brick veneer, horizontal metal and much more. Framework seamlessly integrates into VP Command, making it easy to price your exterior stud walls in minutes. Varco Pruden Buildings™ is an experienced leader in bringing quality products, technology and flexible solutions together to streamline the building process.

## Framework Stud Wall Specifications:

- Perimeter/exterior, non-load bearing, non-shearwall, metal stud wall
- Available in 6" depth, 1-5/8" flange width only
- Offered in nominal 16, 18, 20, 22 gauge
- A653 SS, Grade 80, Class 3 raw material (18, 20, 22) Grade 60 (16)
- Maximum Member Length: 30'

Designed to help you win more business with less labor and less install time, Framework™ Stud Wall makes applying architectural wall systems easier than traditional stud wall installation. If your project calls for an architectural wall system on the exterior, and drywall finish on the interior, this is the perfect solution.

**Seamless Integration:**

No need for a separate structural wall engineer, Framework is seamlessly integrated into existing tools you already rely on. It's priced within VP systems and integrates within building structure details.

**Streamlined Schedule:**

Finish the building envelope faster. Builders can close up their projects quicker because they are in control of the primary and secondary installs.

**Save Time:**

Because our studs come to the job site cut to length, part marked, pre-punched, and swaged, builders save on install time. No more measuring and cutting in the field.

**Save on Labor Costs:**

Framework requires less labor hours than traditional stud systems and can be assembled off-site, reducing downtime for crews.

**Dual Purposed:**

Use the same stud for the exterior finish and interior dry wall. Framework allows for most wall systems to be applied including WRB board, EIFS stucco, brick veneer, horizontal metal, and more.

**Reduces Waste:**

Greener solution with less jobsite waste because the studs arrive pre-cut to fit the building exactly.
